

Presenter: Martin Williamson

Title: ISO 55001:2014 Asset Management standard – What it means for lubrication tasks and oil analysis

Abstract:

PAS 55 evolved to become ISO 55000 and defines how maintenance should be approached in much the same way that ISO 9000 helped address quality control. The presentation will focus on what ISO 55000 is and why your business should be considering it and then focus on how to address the lubrication aspects within the framework.
